

Be Smart. Test Smarter.

Stop prediabetes in its tracks

30-39%

of Americans

are estimated to be living with prediabetes*

An estimated

90%

of those with prediabetes are not aware of their risk

Although more effective, only

25-35%

of all those at risk of prediabetes are identified through our targeted A1c testing.

Fasting glucose testing is an imprecise tool to identify diabetes.

The clock is ticking...

5-10%

of those living with prediabetes progress to chronic diabetes each year.

\$1,095 per individual

can be saved by stopping prediabetes from progressing to diabetes.

\$16,682 in annual costs

for those with out of control diabetes.

Offer A1c testing to all

Clients who chose to expand their program and add A1c testing to all employees through Smarter Testing saw an increase in identification of prediabetes risk **3-5 times greater** than other testing methodologies.

Interactive Health Client Example:

Stop prediabetes in its tracks: Smarter Testing works

With a comprehensive wellness program that includes targeted interventions for those at risk, employers can change the trajectory of employee health and their bottom line:

Get Healthy

Within one year, 35% of Interactive Health members with prediabetes moved to a healthy state.

Save Money

Clients see a \$2-9 savings for every dollar spent on Smarter Testing. This can be attributed to the successful risk migration of newly-identified members with prediabetes to a healthier state.
